17th International Conference on Information Technology–New Generations (ITNG 2020)
Shahram Latifi
2020-05-11 This volume presents the 17th International Conference on Information Technology–New Generations (ITNG), and chronicles an annual

event on state of the art technologies for digital information and communications. The application of advanced information technology to such domains as astronomy, biology, education, geosciences, security, and healthcare are among the themes explored by the ITNG proceedings. Visionary ideas, theoretical and

experimental results, as well as prototypes, designs, and tools that help information flow to end users are of special interest. Specific topics include Machine Learning, Robotics, High Performance Computing, and Innovative Methods of Computing. The conference features keynote speakers; a best student contribution award, poster award, and service award; a technical open panel, and workshops/exhibits from industry, government, and academia.

Practical E-Manufacturing and Supply Chain Management Gerhard Greeff 2004-08-11 New technologies are revolutionising the way manufacturing and supply chain management are implemented. These changes are delivering manufacturing firms the competitive advantage of a highly flexible and

responsive supply chain and manufacturing system to ensure that they meet the high expectations of their customers, who, in today's economy, demand absolutely the best service, price, delivery time and product quality. To make e-manufacturing and supply chain technologies effective, integration is needed between various, often disparate systems. To understand why this is such an issue, one needs to understand what the different systems or system components do, their objectives, their specific focus areas and how they interact with other systems. It is also required to understand how these systems evolved to their current state, as the concepts used during the early development of systems and technology tend to remain in place throughout the life-

cycle of the systems/technology. This book explores various standards, concepts and techniques used over the years to model systems and hierarchies in order to understand where they fit into the organization and supply chain. It looks at the specific system components and the ways in which they can be designed and graphically depicted for easy understanding by both information technology (IT) and non-IT personnel. Without a good implementation philosophy, very few systems add any real benefit to an organization, and for this reason the ways in which systems are implemented and installation projects managed are also explored and recommendations are made as to possible methods that have proven

successful in the past. The human factor and how that impacts on system success are also addressed, as is the motivation for system investment and subsequent benefit measurement processes. Finally, the vendor/user supply/demand within the e-manufacturing domain is explored and a method is put forward that enables the reduction of vendor bias during the vendor selection process. The objective of this book is to provide the reader with a good understanding regarding the four critical factors (business/physical processes, systems supporting the processes, company personnel and company/personal performance measures) that influence the success of any e-manufacturing implementation, and the

synchronization required between these factors. · Discover how to implement the flexible and responsive supply chain and manufacturing execution systems required for competitive and customer-focused manufacturing · Build a working knowledge of the latest plant automation, manufacturing execution systems (MES) and supply chain management (SCM) design techniques · Gain a fuller understanding of the four critical factors (business and physical processes, systems supporting the processes, company personnel, performance measurement) that influence the success of any e-manufacturing implementation, and how to evaluate and optimize all four factors

User-Innovation Viktor Braun 2009-06-06

Economic growth is highly dependent on technological progress and innovation, yet the sources from which these innovations originate are still largely misunderstood and untapped. Recent research has demonstrated that users, rather than manufacturers, are often a critical source of innovation in numerous fields from extreme sports to medical devices to software. This book systematically identifies the most important barriers to user-innovation and critically evaluates the democratization of innovation argument by critically assessing the main legal, economic, technological, and societal barriers to

user-innovation for the first time and proposing alternative possibilities. Through original research the author reveals the dynamics of user-innovation and offers strategies for minimizing those factors that inhibit and stifle the spread of this phenomenon. From this analysis it becomes clear that user-innovation has become more difficult over time and that the problem is now of how manufacturers can enable users to overcome the discussed barriers and simultaneously benefit from such consumer-driven activities. Arguing that licenses are not just an important technology commercialization instrument but are tools critical to generating innovations, the author explains how licenses can in certain

situations be employed to help users overcome some of the barriers to user-innovation. *User-Innovation: Barriers to Democratization and IP Licensing* is a practical guidebook as well as a startlingly original work of scholarship that will be essential reading for years to come.

Multiantenna Digital Radio Transmission
Massimiliano Martone
2002 This work focuses on a new digital radio architecture now emerging as a key technology in the wireless industry and in the third generation of cellular communication. This book addresses the problems of wireless high data rates from a physical layer point of view and presents an innovative approach from both a theoretical and practical point of view. The author explains the fundamental theory for the transmission of digitally modulated signals with and without antenna arrays, details new families of digital radio architectures, describes advanced signal processing

methods and evaluates algorithmic approaches by hardware platforms and associated measurements.

Assistive Technology for Blindness and Low Vision

Roberto Manduchi

2018-09-03 Assistive technology has made it feasible for individuals with a wide range of impairments to engage in many activities, such as education and employment, in ways not previously possible. The key factor is to create consumer-driven technologies that solve the problems by addressing the needs of persons with visual impairments. Assistive Technology for Blindness and Low Vision explores a broad range of technologies that are

improving the lives of these individuals. Presenting the current state of the art, this book emphasizes what can be learned from past successful products, as well as what exciting new solutions the future holds. Written by world-class leaders in their field, the chapters cover the physiological bases of vision loss and the fundamentals of orientation, mobility, and information access for blind and low vision individuals. They discuss technology for multiple applications (mobility, wayfinding, information access, education, work, entertainment), including both established technology and cutting-edge research. The book also examines computer and digital media access and

the scientific basis for the theory and practice of sensory substitution. This volume provides a holistic view of the elements to consider when designing assistive technology for persons with visual impairment, keeping in mind the need for a user-driven approach to successfully design products that are easy to use, well priced, and fill a specific need. Written for a broad audience, this book provides a comprehensive overview and in-depth descriptions of current technology for designers, engineers, practitioners, rehabilitation professionals, and all readers interested in the challenges and promises of creating successful assistive technology.
